How Many Can I Store?

Storage Efficiency

At some point, every successful venue will max out its storage space, and buying more chairs isn't an option simply because there isn't room to store them. However, the way you store furniture can make a big difference. With the right carts, you can double or triple your storage space in a jiffy, allowing you to host larger and more profitable events.

Some carts are designed to store more products compactly. Others feature a lower or narrower clearance, so they can make it through tight spaces. As an example, let's see how much space it would

High-Capacity Push Cart

Chairs per cart:	Number of carts needed:
80	1
Square footage of storage needed per cart:	Total storage space needed:
27.7 sq. ft.*	27.7 sq. ft.*
Employees needed to move cart:	
2	

*Includes 3' of clearance around each cart.

There is also a stacking version of this cart, which allows you to use vertical storage space. The High-Capacity Stacking Cart stacks 3 high with the assistance of a forklift.

Comfort Seating Pan Cart

Chairs per cart:	Number of carts needed:
10	8
Square footage of storage needed per cart:	Total storage space needed:
6.9 sq. ft.*	110.8 sq. ft.*
Employees needed to move cart:	
1-8	

*Includes 3' of clearance around each cart.

Looking at other carts?

You can use a chair cart to move stacks of Classic chairs. Stacks of chairs can take up the same storage space as the Pan Cart.

Folding Table Storage

Table carts store event tables with varying space efficiency. As with chair carts, pay attention to the size of a loaded cart to make sure that the cart fits through all doorways and elevator entrances at your facility. The diagram below shows you how much space it would take to store 100 ABS Folding Tables (Rectangular, 30" x 72" size) with different cart options.

RT Cart – Flat

Tables per cart:	Number of carts needed:
10	10
Square footage of storage needed per cart:	Total storage space needed:
16.7 sq. ft.*	167.4 sq. ft.*
Employees needed to move cart:	
1	

*Includes 3' of clearance around each cart.

RT Cart – Double Capacity

Tables per cart:	Number of carts needed:
20	5
Square footage of storage needed per cart:	Total storage space needed:
16.7 sq. ft.*	83.5 sq. ft.*
Employees needed to move cart:	
1	

*Includes 3' of clearance around each cart.

Got lots of tables to store?

Check out our RT Cart - Stacking, which can stack 3 high (forklift and X-Base required).

What kind of cart do you need?

Carts that slide under a stack of chairs and move the stack around are called **chair dollies** or **hand trucks**. You'll need at least one chair dolly per employee.

Carts that are designed for furniture to be stored on the cart are called **caddies** or **storage carts**. You'll need enough storage carts to hold all the furniture at once.

Measure First

To avoid problems with carts not working with your property's space constraints, measure the following things before ordering your carts.

Storage rooms:

Measure square footage, ceiling height, thresholds, and doorways.

Elevators:

Including doorways and square footage.

Doorways:

Including the threshold and the width and height of ballroom doors, kitchen doors, and back-of-house entrances.

Hallways:

Pay attention to tight corners and low clearance areas.

Forklift:

If you are stacking high-capacity carts with a forklift, check to see how much clearance is needed in storage areas to use the forklift, as well as the clearance needed at entrances and exits.

Wondering what your cart options are?

Match your chairs and tables to the right carts.

Table & Cart Options

ABS Cocktail Table
(24" to 36")
